

Instructions

You are participating in an experiment on economic decision-making and will be asked to make a number of decisions. If you follow the instructions carefully, you can earn a considerable amount of money. At the end of the experiment, you will be paid your earnings in private and in cash.

During the experiment you are not allowed to talk to other participants. You can ask your questions after the instructions and before we start the experiment.

Your earnings depend on your own decisions and on the decisions of one other participant. The identity of the other participant will not be revealed. The other participant remains the same during the entire experiment and will be referred to as “the other” in what follows.

The experiment consists of 30 periods and at each period your screen will look like the

The screenshot shows a web-based experiment interface with a yellow border. At the top, there are two boxes: "Period" containing "Test1 out of 1" and "Remaining time (sec.)" containing "57" in red. Below these is a large section titled "DECISION ENTRY" with the text "My choice in the current period is" followed by a blue input box. A red "Enter" button is centered below the input box. The bottom section is divided into two parts. On the left is the "EARNINGS CALCULATOR" with labels "your choice" and "other's choice" next to blue input boxes, both containing "-1.0". A grey "Calculate" button is below these. On the right is a section titled "Record of past outcomes" which is currently empty. At the bottom left, there is a table with four columns: "your choice", "the other's choice", "your earnings", and "the other's earnings". The table is currently empty.

your choice	the other's choice	your earnings	the other's earnings

picture below.

In each period you have to choose a number between 0.0 and 28.0 (in increments of 0.1 points). The other also chooses a number between 0.0 and 28.0. You are asked to type in your choice at the top of the screen and click “Enter”. Your earnings in points depend on your choice and the other’s choice. The table you have received gives information about your earnings for some combinations of your choice and the other’s choice. The other gets the same table.

You can calculate your and the other’s earnings in more detail (for choices that are not multiples of 2 for instance) by using the EARNINGS CALCULATOR at the bottom left of your screen. By filling in a hypothetical value for your own choice and a hypothetical value for the other’s choice you can calculate your and the other’s earnings for this combination of choices. In each period you have about 1 minute to enter your decision. A history of your and the other’s past choices and earnings is available at the bottom right of your screen.

At the end of each period you are informed about the other's choice and your and the

Period		Remaining time (sec.)	
Test1 out of 1		1	
Your choice is xx The other's choice is xx Your earnings in this period are xx The other's earnings in this period are xx Continue			

other's earnings in that period as in the picture below.

Your total earnings in points are the sum of your earnings in points over the 30 periods. Your earnings in points will be converted into EUR according to the following rate: 100 points = 1 EUR.

Now we move to the trial period. The result of the trial period will not be counted into your earnings. Please follow our instructions in the trial period.
